

ABSTRACT OF THE DISCLOSURE

A low-heat accumulating thermoplastic resin composition containing 100 parts by mass of a thermoplastic resin [A] and 0.1 to 15 parts by mass of an inorganic pigment [B] having an infrared-reflecting property, and a molded product comprising the composition. The low-heat accumulating thermoplastic resin composition of the present invention is capable of providing a dark-colored molded product exhibiting a less heat accumulation as well as excellent weather resistance and impact resistance.
